

**By George Mbiro Karanja**

On 14 February 2013 I was enrolled in Form One at St. Josephine Bakhita Secondary School – Gitare. For the four years I was at the school, I gained a lot in many areas such as, learning life skills which helped me to relate with other students, teachers and other people in the community. Through the support of teachers, parents and relatives I completed my four year course in November 2016.

Thereafter I got a letter of admission at Kenya Technical Trainers College (KTTC) in the month of September 2017 to pursue a Three years Diploma course in Information and Communication Technology (ICT). I am almost completing my first year of study. The course is helping in experiencing the modern technology through working with computers.

After the completion of the course, I hope to continue with my education to the degree level and later postgraduate.

Above all, my passion and goals for life is to become a computer expert to cope up with the modern technology that is improving periodically. I would also like to have experience in every computer's parts and other related devices, solves problems using computers, developing programs, creation and implementation of software.

I appreciate the role St. Josephine Bakhita played in preparation of my career.
